

The effects of climate change  
and deforestation: how can  
farmers adapt or mitigate  
them?

# Transition to a diversified, forest-friendly, resilient cocoa production model

**Steer away from assumptions and build strong knowledge at farmer level**

**Assist farmers to make investment and transit to other cropping systems**

**Embed resilient cocoa in a holistic landscape approach**

# Steer away from assumptions and build strong knowledge at farmer level

*Improving cocoa farmers' resilience  
through integrated soil fertility  
management – feed research into  
extension*

# Assist farmers to make investment and transit to resilient cropping systems

- Investment in inputs
- Investment in planting material
- Overcoming drop of productivity
- ...

# Embed resilient cocoa in a holistic landscape approach
